ENERGY 10K TRAINING PLAN

Here is a 10K training plan designed for women. This plan is not one-size-fits-all. It is adaptable to your daily schedule, whether it is packed or not - so you can own your energy better during training.
ENERGY 10K TRAINING PLAN

WHAT

The goal of this 10K plan is to get you to the starting line of any 10K race feeling confident and ready to run. To make use of this training plan, which contains four workouts per week, you should already be comfortable with running a 5km distance and should commit to at least two of the run workouts each week (including the long run). As the training plan builds in intensity, there’ll always be a workout option to suit your schedule. And if you’re looking for a race to train towards, sign up to our virtual 10K – in the box at the bottom of the page.

WHY

Taking a personalized approach means that you’ll train in a way that suits your schedule. You’ll only do as much as you choose to. Pick from a selection of light, moderate, and high intensity workouts. This plan has it all covered.

HOW

Each day you’ll choose the intensity of your workout from 1 to 10 so the plan can present you with either a lighter or more intense workout option. There are four workouts a week in total, offering a balance of strength and drills to improve your technique, fitness, and to lower the risk of injury, plus a long run to build endurance. Watch an introduction to the training plan HERE.
This plan is for those who can comfortably run a 5km distance. The goal is to get you to the starting line feeling confident and ready to run. You’ll need to commit to at least two of the workouts each week and make sure one of them is the long run. Workouts will include drills to improve your form, technique, fitness and lower the risk of injury.

The information provided in this training plan is for guidance purposes only, and does not substitute for professional medical advice. You should always consult a medical professional or healthcare provider if you’re seeking medical advice.

<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Drills improve your running technique by working on coordination, tendon stiffness, and the time your feet spend in contact with the ground. They should be done during a technical running workout, or in preparation for tempo and fartlek workouts. You’ll need a 20-30 meter stretch for each drill. Make sure you warm up for at least 15-20 minutes before you start and take a short walking break after each one.</td>
<td>Strides are designed to improve your running form and speed. The idea is to lengthen your stride while maintaining your cadence (the speed at which your feet turnover). Strides are best done after an easy or technical running workout, or to prepare your body ahead of tempo work. You’ll need a 100 meter stretch of road, track, or other evenly surfaced ground. Start with an easy running pace and then every couple of meters, increase your speed gradually by lengthening your stride until you’re almost sprinting.</td>
<td>Your core includes your back, abdominal, and pelvic muscles. Keeping it strong is so important for your stability and your running form – especially in the later stages of your run when you’re tired. At least one core workout a week is essential.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### NOTES

Cross training is any activity that gets your heart rate up without heavy impact. Activities include cycling, swimming, roller skating, power walking, using the cross trainer, or rowing machine. Cross training is ideal for active recovery after a running workout and building your endurance without overloading your bones, joints, and muscles. Choose an activity you enjoy and mix it up!

Fartlek is a method of training designed to improve your fitness, pacing, speed (and especially with hilly fartleks) your strength and endurance – and it’s meant to be fun. The idea is to change your pace during a continuous run. You can do this at random, simply by increasing or reducing your speed at various points; or you can structure the intervals by distance or time. If there are no hills, change your pace every few minutes.

<td></td>
</tr>
<tr>
<td><strong>LOW INTENSITY</strong></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>NOTES</strong></td>
<td></td>
<td></td>
<td>Hill runs improve your strength, endurance, technique and speed. During hill runs you should aim for an effort level of no more than 7-8. Hill runs are best done on a smooth and gradual incline – not a steep hill. If you don’t live in a hilly area, bridges over rivers often have just the right amount of incline. You should choose a hill you can run up while keeping good running form.</td>
<td>This tempo run is meant to build your confidence and give you a feel for faster paces. Use the first 3km of this 6km run to settle into a fast but controlled pace and push yourself a little harder in the last 1km.</td>
<td></td>
<td></td>

**NOTES**

- Try to focus on your running form during these sessions.
- Adjust your expectations and go at a gentle pace. You could ease the pressure by leaving your watch at home and asking a friend to join you.
- If you don’t feel like running or doing strides, try 30 mins of cross training instead.
- Take it easy today. If you still feel like moving a little, do gentle yoga, pilates, stretching, or go for a walk outside.

ENERGY 10K TRAINING PLAN

SUNDAY RACE DAY

10K RACE

HIGH INTENSITY

ADJUST YOUR EXPECTATIONS SLIGHTLY AND GO EASY ON YOURSELF. START SLOWER AND AIM FOR A PROGRESSIVE RUN. IT’S VERY NORMAL TO FEEL A BIT SHAKY JUST BEFORE YOU START A RACE. BUT ONCE YOU GET GOING, AND RELAX INTO YOUR PACE, YOU’LL FIND YOUR RHYTHM AND HOPEFULLY START TO ENJOY IT!

MEDIUM INTENSITY

REST. YOU CAN RACE ANOTHER DAY. AS SOON AS YOU HAVE ANOTHER CHANCE, REASSESS, AND RUN THE 10K WHEN YOU’RE READY.

LOW INTENSITY

RACE WEEK

SIGN UP FOR THE ENERGY 10K, A VIRTUAL RACE FROM THE ADIDAS RUNNING APP HERE

If you want to do some of your workouts with other like-minded runners, connect with the Adidas Runners Community [here](#)
**THE GLOSSARY**

**DRILLS**

Drills improve your running technique by working on coordination, tendon stiffness and the time your feet spend in contact with the ground. They should be done during a technical running workout, or in preparation for tempo and fartlek workouts. You’ll need a 20-30 meter stretch for each drill. Make sure you warm up for at least 15-20 minutes before you start and take a short walking break after each one.

**FARTLEK**

Fartlek is a method of training designed to improve your fitness, pacing, speed and (especially with hilly fartleks) your strength and endurance – and it’s meant to be fun. The idea is to change your pace during a continuous run. You can do this at random, simply by increasing or reducing your speed at various points; or you can structure the intervals by distance or time. You can find both options in your training plan. So play around, mix it up and have fun with it!

**STRENGTH WORKOUTS**

Never underestimate the value of strength training when it comes to reaching your running goals. One strength training workout a week can help prevent injuries. It will also help you to maintain your speed, endurance, and running form – in the later stages of a race.

**HILL RUNS**

Hill runs improve your strength, endurance, technique, and speed. During hill runs you should aim for an effort level of no more than 7-8. Hill runs are best done on a smooth and gradual incline – not a steep hill. If you don’t live in a hilly area, bridges over rivers often have just the right amount of incline. The hill you choose should enable you to run up it while keeping good running form.

**CORE WORKOUTS**

Your core includes your back, abdominal, and pelvic muscles. Keeping it strong is so important for your stability and your running form – especially in the later stages of your run when you’re tired. At least one core workout a week is essential. You can find lots of great strength and core workouts in the adidas training app [HERE](#).

**STRAIGHT WORKOUTS**

Your core includes your back, abdominal, and pelvic muscles. Keeping it strong is so important for your stability and your running form – especially in the later stages of your run when you’re tired. At least one core workout a week is essential. You can find lots of great strength and core workouts in the adidas training app [HERE](#).

At least one core workout a week is essential. You can find lots of great strength and core workouts in the adidas training app [HERE](#).

**CROSS TRAINING**

Cross training is any activity that gets your heart rate up without heavy impact. Activities include cycling, swimming, roller skating, power walking, using the cross trainer or rowing machine. Cross training, is ideal for active recovery after a running workout and building your endurance without overloading your bones, joints, and muscles. Choose an activity you enjoy and mix it up!

**PACE 1-10**

To help you judge your own level of effort, our training plan uses a pace scale of 1-10. You can think of level 1 as your resting effort (such as relaxing on the sofa), level 4-5 as your casual running pace and level 10 as your all-out fastest pace. For easy runs and long runs you should aim for a 4-5. For tempo workouts and fartleks aim for a 6-8 – and maybe even a 9 in the last minute if you’re feeling up for it.

**LONG RUN**

Your long run is, as the name suggests, the most distance you’ll cover each week. It should be done at your usual running pace or slower; start out at an easy pace and, if you feel like it, build your speed when you’re around 75% of the way through. During long runs, you should never feel so out of breath that you can’t speak in full sentences comfortably.
